

Leo

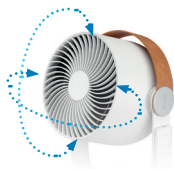

3D Air circulator

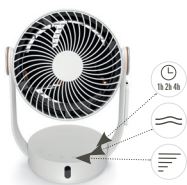

Stadler Form[®]
SWISS DESIGN SINCE 1998

LEO — refreshes all around!

3D oscillation mode for optimum distribution of the air flow

Natural Breeze mode simulates natural wind conditions

Easily accessible remote control with magnetic holder

Do you want to create a comfortable refreshing climate? With his innovative 3D oscillation mode, Leo can provide optimum air distribution in an instant. He can also circulate the air flow in a room both vertically (from -5° to 85°) and horizontally and has a range of 8 metres. The swing range of the 3D air circulator from left to right can be adjusted to suit your needs and you have 3 angles to choose from, 60° , 90° or 180° . Leo can be set up on the floor or on a table, he is also mobile and takes up very little space. His practical carrying handle in faux leather means that he can be moved around quite easily and set up wherever he may be needed. From a really quiet, gentle breeze to strong gusts of wind: Leo has 4 refreshing speed settings to suit every need. He also has an impressive range of intelligent functions including a 1–7 hour timer, a natural breeze mode and a remote control that is magnetically attached to the side of the device. Leo is the ideal partner for creating a comfortable and pleasant indoor climate – both in summer and in winter.
